

ScotRail Trains Station Accessibility Information April 2024

Station Categories

Every station must be allocated by operators to one of three categories A-C and described in public facing information provided by the operator (including station maps, timetables and posters, and the station accessibility information provided alongside the Accessible Travel Policy as described in Section 4, A2.2 of this guidance) as follows:

Category A: This station has step-free access to all platforms / the platform

The station has step-free access to and between all platforms, at all times trains are running, via level access, lifts or ramps (in accordance with new-build standards re gradient/length). Additional station entrances or walking routes not meeting the A criteria are permitted, providing the additional walking distance to avoid these is no more than 100m

Category B: This station has a degree of step-free access to the platform, which may be in both directions or in one direction only - please check details

The station does not meet category A, but has step-free access to either all platforms or at least one platform. In some cases, the station may be usable for some disabled and older people, but in others major barriers may exist which are likely to restrict the ability of some disabled or older people to use the station. This may include long or steep ramps, access between platforms that may be via the street, and there may not be step-free access to or between all station areas. In its station accessibility information provided alongside the Accessible Travel Policy as described in Section 4, A2.2 of this guidance, an operator may – for the benefit of passengers and staff that require further detailed information – choose to further classify stations in category B according to the following definitions, using the text in bold to describe the level of step-free access:

B1. Step-free access to all platforms - may include long or steep ramps. Access between platforms may be via the street.

This station does not meet the A criteria but has step-free access (to all platforms) likely to be usable by many people with reduced mobility. Access may be via ramps, up to 1:10 gradient (any length). Short end-of-platform ramps may be up to 1:7. Access between platforms may be via the street, no more than 400m. Access via level crossings is permitted (if full barrier). Access routes may be via car parks, or short access roads without pavements, but otherwise routes via the street must include a pavement. Additional entrances/ walking routes not meeting the A1 or A2 criteria are permitted, providing the additional walking distance to avoid these is no more than 400m.

B2. Some step-free access to all platforms - please check details

This station has step-free access to all platforms, but major barriers exist which are likely to restrict the ability of some people to use the station. Step-free routes do not meet the A or B1 criteria (e.g., long ramps steeper than 1:10, or the step-free route between platforms is greater than 400m). Any station with an ungated or half-barrier level crossing between platforms is in B2 or lower. Any station where step-free access is only available at certain times, or only to certain passengers, is in B2 or lower (e.g., because lifts are unavailable when the station is unstaffed) for example, if the step-free entrance opening times depend on staff presence at the station.

B3. Some step-free access, may be in one direction only - please check details

This station has step-free access to fewer than the total number of platforms

Category C: This station does not have step-free access to any platform
